

# IVP Video Display Upgrade

4-inch video display upgrade module for legacy machines

The IVP Video Display Upgrade modernizes legacy vending and coffee machines by adding a 4-inch, 480 x 480 pixel IPS-TFT-LCD display and short looped video playback. It refreshes the display/front-panel area without replacing the complete machine.

- Modern visual appearance for older machines with LCD displays.
- Machine-specific versions for ASTRO, KIKKO MAX, ROBIMAT and SNAKKY MAX / SFERA machines.
- Short repeating video content for brand messages, product promotion or attention grabbing.
- Detailed installation documentation is available on request.

## What does it solve?

Older machines are often still technically usable, but their display and front panel may look outdated. Video Display Upgrade gives these machines a more modern, eye-catching appearance.

- 4-inch, 480 x 480 pixel IPS-TFT-LCD display.
- Short looped video content, typically around 10 seconds.
- 3D-printed PET-G housing / front panel design tailored to the machine type.
- Modernizes the front panel while keeping the machine's basic functions.
