

IVPay QR

QR-based online payment interface for existing machines

IVPay QR is a retrofit payment interface for vending, coffee, snack and drink machines. After the customer scans the QR code and completes payment on a mobile phone, the system sends an approval or credit signal to the machine.

- Cashless payment for existing machine fleets, without replacing the machines.
- Modular hardware: Sticker Lite, Display, mobile router and complete set.
- The purchase process runs on the customer's own phone.
- Suitable for pilot projects and multi-machine operator rollouts.

Functional purpose

The system adds a digital payment path to existing machines. The final configuration depends on the machine type, on-site connectivity and the required user flow.

- QR-based payment start on the customer's own phone.
- Can be connected to an online payment provider.
- Machine-side approval or credit after successful payment.
- Wi-Fi-based setup with optional mobile connection.

Available configurations

Configuration	Use	Main benefit
Sticker Lite Wi-Fi	Entry-level IVPay QR solution for existing machines.	Cost-effective start, with later Display upgrade option.
Display	Clearer QR display and better customer guidance.	Stronger visual presence and a more premium look beside the machine.
Mobil router és antenna	Mobile internet connection at site level.	Useful where Wi-Fi is weak or unavailable.
Complete set	Coordinated setup of Sticker Lite, Display and connection elements.	For a more visible pilot or reference site.
